Graph 5:

I think the visualization is bad because it does not have a clear coordinate. It seems like it has some sort of little boxes to represent the geographical location. However, it would be better to clarify its coordinate. One feasible improvement is that the state / county borderline could be used as the coordinate.

Graph 10:

This visualization is also not good. It seems like the length of the lines are representing the amount of electricity usage. However, folded lines are readable. One improvement is that the area of rectangles could be used to represent the electricity usage.

Graph 11:

This visualization is not good. Those skewed pie charts make it hard for audiences to compare between them. One improvement is to make pie charts straightforward.

Graph 15:

This visualization is not good. The color scheme is misleading. It seems like the color of the bars is randomly assigned. It would be helpful to use the same color for countries in the same continent.
